In the Legionella Risk history Question Package, under the **Travel itinerary, Healthcare setting exposures**, and **Assisted Living Exposure** sections, the Arrival date and Start date variables no longer precede the other variables in these sections. We’ve reordered the variables so that name of the facility is the first variable listed. If the facility name is known, entering the name will make the subsequent variables editable. If the facility is unknown, users can indicate as such (“**Unknown**”) in the facility name field which will also make the subsequent variables editable.
